Do not walk in fear of Covid-19. There are early treatments that must be used, including large doses of vitamin C but early treatment is essential including with hydroxychloroquine plus zinc.

No one in Big Pharma or big tech wants the Health survival message to be heard. Or so it seems. Why not?

BREAKING: NIH Limiting Early Treatment for COVID Patients a Death Sentence for Many Americans

LOS ANGELES, CA - The National Institutes of Health (NIH) recently announced that the federal agency would take the radical step of prohibiting early treatments nationwide for COVID-infected patients, except those already hospitalized and requiring oxygen. America’s Frontline Doctors (AFLDS) founder, Dr. Simone Gold, M.D., J.D., FABEM, released the following statement in response to the decision.

White Coat Summit II SCOTUS Press Conference

OUR VOICES HAVE BEEN CATEGORICALLY BANNED FROM ALL SOCIAL MEDIA PLATFORMS
America's Frontline Doctors Say "No" to More Lockdowns

Physicians from across the country offer hope for Americans at the second White Coat Summit. Bringing a strong message against additional lockdowns and hope for early treatment options, America’s Frontline Doctors (AFLDS), a coalition of physicians dedicated to putting patients first, gathered for their second White Coat Summit in Washington on Friday and Saturday, 10/16-10/17.

WE ARE BEING BANNED FROM EVERY SOCIAL MEDIA PLATFORM.

SOMEONE DOES NOT WANT YOU TO HEAR OUR MESSAGE.
“Early treatment is the key. And there is an inexpensive alternative. We are here today to say that COVID-19 does not need to kill ... and you do not need to walk in fear any longer,” said Dr. Robin Armstrong, an internal medicine physician practicing in hospitals and in nursing homes. AFLDS supports making hydroxychloroquine available to all Americans over the counter, just as it has been in many parts of the world for decades.

Help us to fight back against the RAMPANT CENSORSHIP AND SILENCING by inviting your friends to sign up for our NEWSLETTER.

Dr. Gold's interview with Debbie Georgatos on her podcast:

America, Can We Talk?

In the October 21, 2020, episode of her live podcast, America, Can We Talk, host, Debbie Georgatos, asked Dr. Gold, “Is a vaccine really needed?” Dr. Gold answered (minute 21.45):

"It's fundamentally irrational to take an untested, unproven drug, manufactured by a drug manufacturer that is shielded from liability, when you've got a safe, effective decades old safe, cheap widely available alternative that works. No normal parent would say to take this unknown thing..."
...Why would you be treating with a vaccine a healthy human being for a very trivial illness. That's a problem. You can't be going around giving medical treatments to people who are not sick for something that isn't going to really harm them."

"The bumper-sticker directive to ‘follow the science’ was actually an evasion
The bumper-sticker directive to ‘follow the science’ was actually an evasion of responsibility. It let people off the hook for their bad decisions in a crisis. Was New York Governor Cuomo’s executive order sending COVID-hospitalized patients back to nursing homes to infect other vulnerable nursing home patients ‘following the science’? Of course not. And sending post-hospitalization COVID-positive patients back to nursing homes was unnecessary. Relative to the total nursing home population, Governor Cuomo contributed to a larger percentage of nursing-home deaths—especially when compared to the states without such a policy...” Dr. Simone Gold, MD, JD
